1st March 2019

ENVIRONMENT PROTECTION POLICY

We take our responsibility to the environment seriously, and all personnel will take all reasonable care not to harm the environment.

The risk we pose to the environment is from spillage of chemical substances. If these were to enter the eco-system, they could endanger aquatic or organic life. It is to prevent any environmental harm that we have this Protection Policy.

If pollution occurs, it is the responsibility of the employees as well as Autosmart Australia Pty Ltd. to inform the EPA as soon as they become aware of it.

The exterior of the building will be checked prior to the commencement of work, ensuring that the emergency exits are clear. Litter and windfalls will be collected at this time and disposed of in the bin provided.

The warehouse and grounds are a no smoking area.

The warehouse has a bund around the outer perimeter to ensure the containment of any spillage.

Spill kits are located at the main entrance. The spill kit consists of 100kg of absorbent sand, two bags of Oil absorbent material, and an empty 100L drum that is to be used to contain both sand or oil absorbent material after use. A brush and shovel are contained in the empty drum.

When a spill occurs refer to the product's Safety Data Sheet (SDS). If the spilled product is water based use the sand provided. If the spilled product is oil based, then cover it with oil absorbent material. The absorbent material should then be disposed of in the empty drum provided. Autosmart Australia will then arrange for the safe disposal of the absorbent material.

For large spills caused by tank rupture, etc, a scrubber vac is on site for floor cleaning and product extraction. The largest vessel on site is a 10,000lt mixing tank, bunding has been installed onsite that complies with and exceeds requirements of a spill from this tank.

Should a large spill occur the scrubber vac can be used to suck up the spilled liquid. Waste spill water/liquids will be stored/drained into 1000lt waste water totes placed at the main entry. Autosmart Australia Pty Ltd will arrange for safe disposal of these liquids.

All delivery vehicles are to be unloaded and loaded inside the warehouse, so that should a spill occur it is inside our bunded areas.

No vehicles are to be washed on this site.

Do not sweep or hose loose litter, leaves, paper into the gutters, or drains.

Action to be taken by employees discovering a spill:

- 1) Stop the source of the spill immediately if it is safe to do so.
- 2) Ensure that you do not put yourself or any other person at risk, by any spilled material.
- 3) Contain the spill and control its flow. Refer to material safety data sheets always.
- 4) Clean up the spill promptly.
- 5) It is important to clean up all spills quickly and thoroughly, even small spills.
